

Shorebird Spatial Conservation Gap Analysis of Yellow Sea

Conclusion:

Southern Jiangsu coast has the largest continuous habitat with the highest bird abundance. Bohai Bay, Laizhou Bay, northern Liaodong Bay also have continuous high quality habitats. High quality habitats in eastern Yellow Sea are discontinuous, with high abundance of birds concentrated in some isolated sites. Recommend expand Tiaozini World Heritage site and Binhzhou Shellfish Dike Reserve to cover areas of high bird abundance. Recommend establish new small-scale reserves in Tangshan, Qingduizi Bay, Haijeu coast, Pyeongtaek, etc.
